Since sampling has already been done...I have suggestions.

The TPC, TCEQ and EPA have conducted surface water sampling during the TPC response. The EPA surface water samples are were collected from multiple locations in the 201 Canal, Star Lake Canal and the Neches River. After analyses of water sampling, the data will be is or was? shared with response partners.

These surface water samples are were analyzed for VOCs, semi-volatile organic compounds (SVOCs), total petroleum hydrocarbons (TPH), glycols, total organic carbons (TOC), and oil and grease (O&G). The results from the sampling event were compared to the TCEQ Surface Water Quality Standards (WQS), or to TCEQ Texas Risk Reduction Program surface water protective concentration levels (PCLs), if a WQS was not available for a chemical.

Is this in addition to what is already there, or does it replace anything?
